PREFACE

This publication is one of an annual series compiled and published under the authority contained in Section 5(c) of the Federal Water Pollution Control Act, as amended (33 U.S.C. 1151 et seq.). The data presented reflect the types and costs of sewage treatment facilities and collecting sewers for which contracts were awarded during the calendar year 1970. For comparison purposes, and furnish a measure of progress in providing needed treatment facilities, similar data from previous years are included.

The report was prepared by John L. Dell'Omo, Information Systems Officer, and Olga R. Muros and Florence C. Himes, Statistical Assistants, under the direction of Jesse L. Lewis, Chief, Data and Information Services Section, Technical Data and Information Branch. For the most part, tables were produced by computer, using programs prepared and executed by Thomas Pandolfi, Systems Analyst, Data Operations and Services Section of the Branch.

GENERAL PRESENTATION OF SEWAGE TREATMENT AND COLLECTING SEWERS CONTRACT AWARDS

A. CONTRACT AWARDS—1970

Basic data compiled from contracts awarded for sewage treatment plant facilities and for collecting sewers are presented in Tables 1 through 4. Included are those contracts that clearly describe the type of construction and allow specific identification of the sewage treatment or collecting sewer categories. Contracts that pertain to both sewage treatment and collecting sewers without such specific description are identified as "combinations" and funds are apportioned between the two groups in the same ratio as those for which such description is available.

"Sewage treatment plant facilities" as defined in this report include: treatment plants, stabilization and oxidation ponds, lagoons, leaching systems; replacements, additions, expansions, and revisions to existing plants; ancillary interceptors and outfalls; and those pumping stations which were eligible for Federal grant assistance. "Collecting sewers" include extensions, force mains, combined sewers under $20,000 value, trunk sewers, relief sanitary sewers, auxiliary outlet sewers, and lift stations on collecting or trunk lines. "Collecting sewers" do not include storm sewers. In those instances where combined collection sanitary and storm sewers were not identifiable and separable, one-half of the cost allocations was assigned to the collecting sewer category. The statistics in this report reflect a total of $58.5 million so divided.

Expenditures for sewage treatment works have increased annually at a rapid rate (Table 1). Costs for sewage treatment contracts in 1970 represented the largest annual expenditure for this purpose on record and were 31.5 percent greater than in 1969. Expenditures for collecting sewers were 7.9 percent higher in 1970 than in 1969 and the monies expended for this purpose represented another new high.

The "Combinations" expenditures, where sewage treatment plant facilities were not identified separately (Table 2), were apportioned to show the total contract awards by States (Table 3). Ranking States were Michigan, New York and California, each with total awards exceeding $100 million. In the calendar year 1970, contracts awarded for sewage treatment and collecting sewers totaled $1823.6 million. Sewage treatment plant facilities accounted for $1085.4 million of this amount and collecting sewers accounted for $738.2 million. Contracts awarded on a monthly basis show no seasonal trend (Table 4).

B. METHOD OF COLLECTION

The 1970 contract awards data result from a careful examination of over 75,000 contract notifications in sewage and waterworks construction and related fields. All contracts were checked against contract information already on file. To be sure that no data were omitted, contract information on file was checked against those projects receiving Federal aid under the Construction Grants Program of the Office of Water Programs.

The data on which this report is based were obtained from:

1. F. W. Dodge Corporation daily reports on construction in the sewage construction field.
2. Construction news periodicals such as: Rocky Mountain Construction, Daily Pacific Builder, and Northwest Construction News.

3. States.

With the exception of Alaska, Washington, Oregon, Idaho, Montana, Utah, Wyoming, and northern California, virtually all data were obtained from the Dodge Corporation. Data for Hawaii, Puerto Rico, Virgin Islands and Guam were obtained from other sources such as the local governments. No contracts were reported for Puerto Rico, Virgin Islands and Guam for 1970.

The data presented are composed of contracts awarded by municipalities, special districts and other local governments for facilities used to dispose of domestic wastes and such industrial wastes as may be directed through these facilities. Data were not used where the construction award was for work related to Federal and State installations such as military bases and port authorities, local government installations such as parks, schools and hospitals, and where industrial facilities did not discharge through the municipal system.

Lists of the locations for the contracts awards noted in this publication are available upon request. Write to Chief, Technical Data and Information Branch, Office of Water Programs, Environmental Protection Agency, Washington, D.C. 20242.

1970	1,085	755	738	493	N.A.	N.A.	1,823	1,248

NOTES:

1. Constant dollars on a 1957–59 base were computed as follows: Sewers from PHS Sewer Construction Cost Index (PHS Publication 1132); sewage treatment a composite 45 percent sewers (Publication 1132) and 55 percent PHS Sewage Treatment Plant Construction Cost Index (PHS Publication 1069); water from *Engineering News-Record* construction cost index changed to a 1957–59 base.

2. The Public Health Service sewage treatment data prior to 1957 are composed of identified contracts only. Beginning with 1957, the figures include an amount apportioned to sewage treatment works from the "combination" contracts.

3. Data on collecting sewers prior to 1957 are obtained by subtracting Public Health Service sewage treatment data from the U.S. Department of Commerce sewer data which includes sanitary and storm sewage systems as well as sewage treatment works. Beginning with 1957, the data for collecting sewers were assembled by the Public Health Service and do not include storm sewers.

4. The waterworks data prior to 1957 are based on records maintained by the U.S. Department of Commerce. Beginning with 1957, data were obtained by the Public Health Service.

5. Waterworks data discontinued after 1968.

CONTRACT AWARDS—BASIC DATA—1970

This section defines the basic data compiled. The tables of contract awards are presented by States, major drainage basins, population size groups and contract size groups. Population size does not refer to the population served but to the size of the community or jurisdiction for which the contract was awarded. In some instances a population could not be determined, therefore, the cumulative percentages shown were based on the known population.

Specific costs of the component parts of the three awards categories listed in Table 2 are presented in Tables 5 through 28, where these data were available from the construction awards information. The component parts of these categories are listed on pages 1 and 2 under the descriptions of "Sewage Treatment Plant Facilities," "Collecting Sewers" and "Combinations." For example, table 5 is a breakdown of "Sewage Treatment" from Table 2 and Table 9 is a further breakdown of "New Plants" and "Other" from Table 5. Table 9 tabulations separate stabilization ponds from "New Plant" contract awards and the additions/replacements costs from the "Other" contract awards.

Since many of the contract award notices do not show component costs when the work consists of more than one type of construction tabulations, the subsidiary tables will not always sum to equal the tabulations in the parent tables.

A. SEWAGE TREATMENT WORKS CONSTRUCTION

1. *New Plants and Other Construction.* Table 5 through 8 inclusive present awards for sewage treatment works in two categories—"New Plants" and "Other"—and cover contracts identified as to specific locations and types of construction. Dollars for contracts for "New Plants" include those for the plants, as well as those for associated new stabilization and oxidation ponds, lagoons and leaching systems. "Other" construction contracts include: replacements, additions, expansions, and revisions to existing plants; interceptors and outfalls; combinations of the foregoing; and sewage pumping facilities. "Other" construction also includes contracts whose costs could not be separated between "New Plants" and "Other." As a result, the "Other" category includes some new plants.

2. *New Treatment Facilities and Additions.* Tables 9, 10, 11 and 12 denote contracts for plants and associated new stabilization and oxidation ponds where these costs can be separated, and also those contracts for additions, expansions, revisions, or replacement of plants.

3. *Transit Facilities—Interceptors, Outfalls, Pumping.* Tables 13, 14, 15, and 16 show the separate contracts for the auxiliary works leading to and leaving the plant. The only combination contracts in these tables are those for interceptors and outfalls. The contracts for pumping stations reflect pumping only and represent minimum values. Many, if not most, pumping stations are not separable from contracts for a plant or interceptor.

4. *New Plants Plus Interceptors, Outfalls.* Tables 17, 18, 19, and 20 indicate contracts and total costs for new plants including interceptor and/or outfalls the cost for which could not be separated. Some pumping stations may be included.

5. *Plant Additions Plus Interceptors, Outfalls.* Tables 21, 22, 23, and 24 indicate contracts for plant additions, expansions, or replacements plus interceptors and/or outfalls which cannot be separated for separate listing. Again some pumping stations may be included.

B. COLLECTING SEWER CONSTRUCTION

Tables 25 through 28 present award data that are identified with collecting sewers. These figures include some contracts which were identified as being for both sewers and waterworks. Costs were divided equally between the two categories. The lift stations data in these tables

are for collection lines and are distinguished from pumping stations on transit lines.

C. COMBINATION CONSTRUCTION

Tables 29 through 32 relate to contracts for treatment plant facilities and collection systems in which the parts could not be identified or separated.

In those instances where waterworks data are inseparable from related construction, two-thirds of the value is apportioned to "Combination Construction." One-third of the value is considered as related to waterworks construction only and is not included in this report.

D. APPENDICES

Appendices I and II contain data from 1969 and 1968 respectively. These data, beginning with table 9 in both cases, are included so that data for those years can be compared easily with those for 1970.
